Add-on tools

Add-ons may seem like a good option to start using a test management tool. But, the various available add-ons can help customize Jira to function as a test management but this comes with implications.

Once the number of test executions grows above 100,000, the Jira add-on will slow down Jira's performance.

For medium size organizations and bigger, this will start after a few months of increasing the overall testing volume. For companies working Agile and DevOps where the percentage of automation increases all the time, it might take even less than that.

These Performance issues will affect not only the testers, but the entire company relying on Jira as their essential development tool, causing:

- Out of memory errors
- Updates stall
- Crashes

What else?

For most add-ons advanced reporting are recorded as causing performance issues. In addition, some of the advanced reporting requires additional add-ons such as EasyBI and Xporter.

Even integration possibilities are limited to what works with the specific add-on.

Choose the best of breed option and create a 2 way integration with a stand-alone tool to enjoy all the benefits of the integration while scaling up your business without harming Jira.

Jira Test Management Add-Ons

No internal storage

Performance Issues

Out of Memory Error:

- Halt email sends
 - Prevent updates to the activity stream
 - Cause the Jira application to crash
-

**Downgrading
overall Jira
Performance**

- ✘ **Less flexibility**
- ✘ **Basic level of reports only**
- some advance reports require additional tools
- ✘ **Advanced reporting that can be created within the system is recorded to limit system performance**
- ✘ **Less integration options**
- ✘ **Missing efficiency features for testing**
- ✘ **Pay for EACH JIRA USER**

Jira is built to plan and to track, not to test.
Choose a tool that has all the benefits of working seamlessly with Jira without compromising on performance and important testing aspects.

PractiTest

Test Management for Jira Cloud, Server & Data Center

Secured AWS self-storage

No performance issues

- ✓ 24/7 monitoring & scaling - Ensuring performance
- ✓ Jira No-Plug in option
- ✓ Advanced testing features
Permutations, Parameters
- ✓ Customized, Sharable reports and dashboards
- ✓ Endless number of Integrations
- ✓ Pay only for PractiTest users (not all Jira users)

Extract valuable insights from your real time test results and release better software

Create reports with the use of professionally-predefined templates and takes advantage of the filters and field's customization you already have.

The Report Engine Module offers unique options:

- Schedule your report daily, weekly or monthly.
- Modify report columns and graphs.
- Re-run a report instantly with one click.
- Re-run & update a report at time created (with old data).
- Decide which users will get notified by email when the report is ready.

Gain transparency into progress with customizable and advanced dashboards and reports:

Summary Reports

Editable excel with your choice of columns

Steps Summary Reports

Editable excel with your choice of columns including steps

Aggregated Reports

Excel report with up to 2 system or custom fields plotted - color coded

Traceability Reports

Editable excel with full traceability of requirements, tests and issues - color coded

Detailed Reports

Full Excel or PDF report with choice of columns-non editable
