Function and Methodology in Large scale Environments

RADWIN is a communications equipment market leader, delivering high-performance Broadband Wireless Access for carriers & service providers.

The RADWIN Verification Unit does end-to-end testing that includes all possible product environments

and customer simulations. In addition to complex testing environments, testing cycles are large-scale, consisting of over a thousand tests for each version. "This means complex teamwork and schedules that require a top-notch test management tool", says Kfir. "Stability and availability are our top concerns. With PractiTest we never had a system crash or slow down. "It's easy to deploy – the logic of the system and the UI are clear – and the learning curve is very quick ". Kfir also commends the PractiTest support: "When you post an issue they get back to you promptly and their turnaround is second to none. They've even included

some features we requested in their releases. You can't get better than that."

Kfir sites a few of the main advantages to Radwin using PractiTest: The simplicity in use, The fact that PractiTest is a light and stable product: no slowdowns, no downtime and no interruptions in workflow, and the

"Their turnaround is second to none, You can't get better than that!"

licensing flexibility: "It's easy for us to add users when we need extra testers."

"The results are effective and better managed testing cycles: accurate planning that is executed on schedule, with clear logging of each and every test, issue and bug. With an average cycle exceeding a thousand tests – that's a big advantage" adds Kfir.
