# BROADCASTING QUALITY WITH CONFIDENCE

MEDIA

**Kaltura is a software company founded in 2006. its mission is to power any video experience. The company offers a broad Video Platform as a Service, as well as turnkey video based SaaS solutions across all these markets. They are also the initiator and backer of a successful open-source video-management project.**

### **The Challenge**

The Challenge for Kaltura was to create a productive, efficient and professional process for their growing QA group. Before working with PractiTest they used Quality Center, but for them it was lacking the easy and low-level coverage they were looking for.

---

The tools is SaaS, very user friendly, board, extremely flexible, and their integrations with JIRA and Confluence are simply great!

---

“We wanted to Implement a clear process from the Requirements, via the Test Planning, and Test Execution; and to have the ability to present a clear visibility report to our Management that reflected our methodology and process.” Said Elad Binyamini, OTT and OVP application QA group manager.

---

Another point worth mentioning was that PractiTest’s standard of service and support is second to none!

---

### The Solution

Kaltura chose PractiTest due to the fact that this tools gave them everything they needed to present and manage the QA and testing lifecycle in a simple and complete solution.

### The PractiTest Benefits

“The tools is SaaS, very user friendly, board, extremely flexible, and their integrations with JiRA and Confluence are simply great!” Mentioned Elad. Another point worth mentioning was that PractiTest’s standard of service and support is second to none!
